THE MAGNITUDE OF A SLIM OBJECT. (1984) (1985)
Order from S&W 4.1.10 01-14-12

Frank, O. 1909. *Physiologie des Menschen* (Human Physiology) v. 1, 2nd ed., p. 250-252.

DESCRIPTORS: *Visual perception, Optical illusion, Sizeup, Eye, Vision, Retina, *Physiology.

The magnitude of an object, that is, its apparent distance in terms of length and breadth, is estimated according to the dimension in which the image of the object has on the retina, and according to the contraction of the muscles of the dioptric apparatus and those of the recti, interni, etc., at the time when the light impression of the image is received. All other things being equal, our impression of the size of an object grows, as it comes within the extension of the image on the retina or of the visual angle. [Author]
